*“Whatever you do, work at it with all your heart, as if working for the Lord, not for men.”
Colossians 3:23*

WHAT MAKES OUR TRAINING UNIQUE?

- ✓ Prior to on-site classes, our instructors will ask questions about your applications and policies and will also make suggestions for safety improvement and OSHA compliance. This allows us to focus on your most important issues, help you correct any problems and eliminate coverage of topics which do not apply to your company.
- ✓ Our programs include the OSHA mandated requirements, as well as information on ANSI national consensus standards, which are best practices in the industry.
- ✓ Mobile elevating work platform training is a core business, not something we do “on the side” a few times a year. We take pride in our instructors’ knowledge, in the quality of our programs and in the results we achieve. You won’t find us relying on a DVD to teach the class; our trainers will make a difference in how your people feel about working safely!

STANDARD TRAINING FEATURES:

- ✓ We retain and back up your training records electronically.
- ✓ We provide continuing support and consultation via phone and email, at no charge. If you have a safety question, we’ll get you the answer!
- ✓ We use pictures and video clips of real accidents to help prevent similar situations at your site. Our training is realistic and relevant and will change how your operators feel about their safety and the safety of those working around them.
- ✓ We can include instruction on a variety of scissor lifts and boom lifts. Each type of aerial work platform gets its own specific instruction, written test and hands-on evaluation.

SAMPLE TRAINING OUTLINE:

- Introduction, outline, and provision for practice operation
- Benefits of training
- Training vs. familiarization
- Management's role in safety and the operator's role
- Knowing your aerial lift & the importance of reading the operator's manual
- The "big four" safety issues including tip-over, fall, collision and electrocution
- Basic components and typical control layouts
- MEWP site risk assessment
- MEWP selection
- Vehicle capacities
- The use of fall protection, as it applies to aerial work platforms
- Operation of emergency ground controls
- Ground conditions
- Weather related dangers
- Pedestrian safety
- Operating in tight areas
- Basic operational issues
- Traveling rules
- How to avoid damage to the equipment and facilities
- Proper parking
- Operation on ramps
- Fueling procedures
- Personal protective equipment
- Pre-shift vehicle and job site inspections
- ANSI standard changes

NOTE: We customize our on-site class outline to reflect only those topics which apply to each customer's site and specific equipment. Other topics are available upon request. It is your responsibility, as the employer, to provide the aerial lift operator's manuals to your operators and ensure they have read them and provide any site specific policies which might exist.

OUR AERIAL WORK PLATFORM CUSTOMERS
INCLUDE:

AY Manufacturing

Ball Corporation

Coca-Cola

Emerson Network Power

Kellogg

PCA

PPG

Schneider Electric

Scotts

WHEN PURCHASING TRAINING, CONSIDER THIS...

“It’s unwise to pay too much, but it’s worse to pay too little. When you pay too little, you sometimes lose everything, because the thing you bought was incapable of doing the thing it was bought to do. The common law of business balance prohibits paying a little and getting a lot – it can’t be done. If you deal with the lowest bidder it is well to add something for the risk you have run, and if you do that you will have enough to pay for something better.”

John Ruskin (1819-1900)

OPTION 1: TRAINING AT YOUR SITE

Course Description:

This is the course for companies needing to formally train operators to use mobile elevating work platforms (scissor and boom lifts). This is the right option if you have new operators and want to ensure they have proper training according to the OSHA standards. If you have existing operators and are unsure of the quality/content of their past training, if you are missing their documentation or if they were certified through a prior employer, this would also be the right option for training. The course includes classroom instruction, written testing and hands-on evaluations for each type of aerial lift they will be using. We are experts at working around busy schedules and will find a day and time that works for your facility. We show operators why they should work safely and the consequences of what can happen to their health and families if the rules are not followed. The pre-training survey, classroom instruction, hands-on evaluations and all OSHA required follow up paperwork are included in the cost of your training.

Class size: Minimum of 6 operators, maximum class size is 15.

Time frame: 5-7 hours depending on number of trainees and equipment types

Pricing: \$125 per person

OPTION 2: RE-EVALUATION AT YOUR SITE

Course Description

Our re-evaluation course is geared towards companies with operators which have already been properly trained at your company and are in need of re-evaluation. The class includes one hour of classroom instruction, a written quiz and a hands-on evaluation. Topics such as tip-overs, falls, collisions and electrocutions are covered. Our real life accident pictures and video clips will remind your operators about the consequences of unsafe actions. It will get the attention of your experienced operators who already know how to operate safely, but may not be applying that knowledge on the job.

Class size: Minimum billing of 6 operators, maximum class size is 15

Time frame: 2-3 hours depending on number of students and equipment types

Pricing: \$95 per person.

NOTE:

Normal training hours are 6AM to 6PM. Saturday and non-standard hour training is available for a \$200 per class additional flat fee. Reasonable travel charges will apply to any operator training conducted outside of Ohio, contact us for a travel quote for your site and project scope.

Dear Dave,

I wanted to express my appreciation for a job well done by your instructor on the recent Aerial Work Platform training for our Maintenance Department. We have used your services for forklift training for many years now, but this was the first Aerial Work Platform training.

The training was very informative. I have been involved in Industrial Maintenance for over 40 years and there was a lot I personally learned. Tom is a great instructor and the feedback from all the Maintenance Techs was very positive. I look forward to working with you for our future safety training needs.

Feel free to use my name as a reference any time.

Regards,

David R Gawelek
